

Learn That Some Tools Can Answer Questions (Like ChatGPT)

How to use: Print first for the main practice. Then use the device to repeat activities and save progress.

LEARNING OBJECTIVES

- 1 Explain what an AI tool is
- 2 Name tools that can answer questions like ChatGPT
- 3 Sort tools into AI tool or not an AI tool

MINI LESSON

Have you ever wondered how some apps seem to know exactly what you're asking? Some special computer tools can read your question and write back an answer — almost like chatting with a very clever helper!

What is an AI tool?

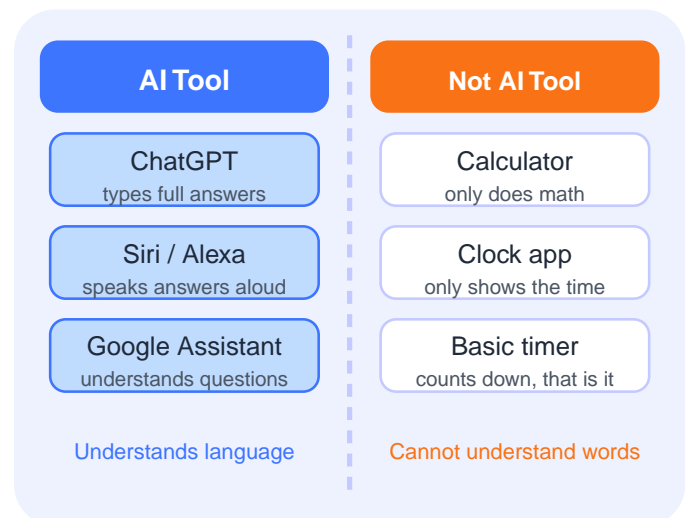

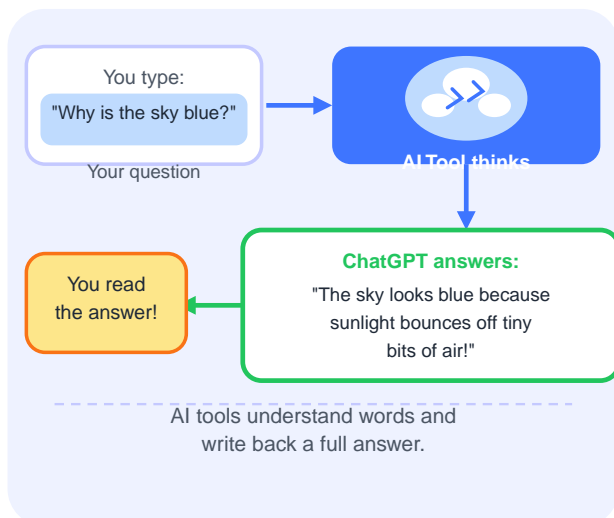

- An AI tool is a computer program that uses artificial intelligence to understand questions and give helpful answers.
- Example: ChatGPT — you type a question and it types back an answer in plain words.
- Other AI tools include voice assistants like Siri and Alexa — you speak a question and they answer out loud.

How is ChatGPT different from a regular search?

- A search engine shows you a list of web pages to look through.
- ChatGPT reads your question and writes a full answer just for you — no links to click.

Not every tool is an AI tool

- A calculator follows set rules — it cannot understand a question in words.
- A clock app just shows the time — it cannot have a conversation.
- AI tools are special because they can understand language and respond to it.

! Ask yourself: "Does this tool understand my words and write or say a helpful answer? If yes, it might be an AI tool!"

TRACING PRACTICE

Trace each word, then copy it twice on the lines below.

EXERCISES — SORT & MATCH

Write each word in the correct column.

WORDS TO SORT

ChatGPT

Calculator

Siri

Clock app

Alexa

Basic timer

Google Assistant

Flashlight app

Bixby

Volume control

AI Tool

Not an AI Tool

EXERCISES — MULTIPLE CHOICE

1. What is an AI tool?

- A tool that only shows pictures
- A computer program that understands questions and gives helpful answers
- A tool that fixes broken computers

2. What does ChatGPT do?

- It plays music for you
- It shows a map of your neighborhood
- It reads your question and writes back a full answer

3. What makes an AI tool special compared to a regular app?

- It can understand the words you type or say
- It uses more electricity
- It has a bigger screen

4. Why is a calculator NOT an AI tool?

- Because it is too small
- Because it cannot understand questions written in words
- Because it does not use electricity

5. Which of these is an AI tool you can speak to?

- Siri or Alexa
- A clock app
- A flashlight app

6. How is ChatGPT different from a search engine?

- ChatGPT can only search for pictures
- A search engine writes answers in full sentences for you
- ChatGPT writes a full answer; a search engine gives you a list of pages

7. Is a clock app an AI tool?

- Yes, because it runs on a computer
- No, because it only shows the time and cannot understand questions
- Yes, because it knows what hour it is

8. What does AI stand for?

- Artificial intelligence
- Amazing internet
- Automatic images

9. Which of these is an AI tool?

- A volume control button
- A basic timer
- Google Assistant

10. What is the best question to ask to decide if a tool is an AI tool?

- Does it have a colorful screen?
- Can it understand my words and give back an answer?
- Does it need to be plugged in?

ASSESSMENT

PARENT / TEACHER CHECKLIST

- Names at least two AI tools (e.g., ChatGPT, Siri, Alexa) without prompting.
- Explains in their own words why a calculator is not an AI tool but ChatGPT is.
- Sorts at least 8 out of 10 tools correctly into AI tool or not an AI tool on screen.
- Scores 9 or 10 out of 10 on the MCQ Quick Check.
